Curin Confident

Ex przecedente schemate siquet duas duntaxat przepositius vocales in diphthongis improprijs esse. L nempe & v. at vocalis quidem. v. nunquam fere reperitur przepositius, nist post consonantes. ch. aut g. aut gbb. veluti chvish gran, gbrin.

Patet etiam omnes sere diphthongos proprias, ornnesque simplices vocales subiunctiuas esse posse in diphthongis improprijs.

Quoties litera. i. in concursu vocalium aut diphthongorum per se syllabam facit extraue diphthongum constituin, duobus in apice punctis notari & debet & solet, in hunc modum: priod, died, died eve.

Diphthongus. vy. è duplici quam habet potestate, quandoque propria quidem, aliquando verò impropria reperitur. Consimilem etenim sonum non habet in vocibus cryn, grysh, rhryd. sirydb, (qua continent diphthongos proprias) ei sono quem in vocibus gryn, grinty de citydo sorum, qua improprias diphthongos possident. Quando impropria est non nifi in fine dictionum inuentur, quibus syllabarum numero auctis & longioribus factis, donec hac diphthongus panultima esticianur, ipsa suam. y. in. y. commutat: vt grym grynach, granty bi granty bien celty die celty dog, vterim cum propria sucita diphthongus, num. y. vbique immutabilis manet: vt cryn crym grynach, granty bien celty die celty dog, vterim cum propria sydb arydben. licèt sepe apud nonullos septentrionales in syllabarum incremento. y. penitus abijetatur. Illi enim a grym non grymach, sed grintaber: à grinty di non granty dom, sed grintaben: à celty do non celty dog, sed celt dog emmech: à grinty di non granty dom, sed grintaben: à celty do non celty dog, sed celt dog emmech: a grinty di non granty do non granty do.

De Dictionibus & earum different is.

HActerus qu'am poruimus accuratiffime de literis & fyllabis tractauimus : nunc ordinis ratio pottulat, vt de dictionibus & earundem generibus disferamus. Dictionem autem definiunt pattem minimamorationis fignificatiuam, ex qua instruitur & in quam resoluitus oratio.

De Articulo. Not Bannog.

Dictionum octofunt differentiz; è quibus primus est Articulus. Est autem articulus dictio; quz licet per se nihil fignificet : vocibus tamen quibusdam vel emphaseas, vel relationis, vel ornatus decorifue gratia prasigi solet. Nam articulus in hac lingua non aisi prapositious inuentur & dicitur, quod vocibus praposatur.

Articulorum autem duo funt genera, al-

quidem quod nominibus tam proprijs quam appellatiuis & pronominibus, vocibulque alijs, nominaliter & materialiter positis ancillatur:& hoc praponitur incipientivel

1. a confonante; cuius generis funt : 0, & y, vt y gw, y raig, y virionedo & y gvirionedo, e dynió y ni, y chvi, y B. y taro, y nachabb, y nig &c.

2. à vocali aut diphthongo; qualia funt, er, & yr: vt yr abbon, yr abbr, er emberasdr, yr ebb, yr y, yr A.yr vylo, yr och, yr lefu, yr e Arthur, y Cynon.

3. Tam à vocali, quam à confonante, cuiusmodi est 35: vt 35 da, 35 aruthr o beth, 35 dir.

verð quod verború perfonis infernire folet : &< iffud præfigitur inchoanti vel

1. à confonante, cuius farinz funt i, vel y : vt i

2. a vocali aut diphthongo : euius forma funt idh, aut ydh: & ir, aut yr : vt idh erchais, ydh obhnau, ir oedhan, yr euthum.

3. Tam à consonante, quam à vocali diphthongoue, cuiuscemodi sunt : a, e, y, ys: vt mia garabh, pann e carer, e'm cerir, ebb y dhybhynnavdh, ys darbhu, ys side.

Exhis patet articulos nominales (maxime. er. & 3r.) tum fibi verbalibufque articulis, tum etiam cateris orationis partibus prafigi & posse & solere, dictionis sententia ita possulante.

Czterim in supra positis exemplis. sc. y waig, y virionedh, & his similibus, soldim. & e numero vocalium ratione quadam & articuli respectu vim consonantis occupare solet, quanquam alia ratione non tantum. V. sed & J. (quotiescunque in eadem syllaba czteris vocalibus praponuntur) consonantium naturam indunt. Nam quoties articuli vius requiritur; G. quidem masculinum radicale, tam singulare quam plurale nunquam suum articulum desent : vt y gw, y gyr, y genen, y genenen & e. G. verò stemininsi radicale & singulare à suo articulo ausugere per aphæresim consueuit, relicta cui antè præsixum suerat, subsequente vocali; quæ si. V. suerit, consonat cum sua subsequente vocali, veræ què consonantis vim obtinet : alioquin verò semper vocalis manet, id est consonantis facultate præsita nunquam reperitur : vt y abbrita ormesi x ramesi & e.

Primus articulorum modus, licêt quidem invariabilis fit tam numerorum quam cafuum generumque ratione: per fingulas tamen cafuum numerorumque fedes non fine fignorum cafibus quibufdam ancillantium adminiculo cum fuis nominibus circumfertur: quò illa que fine eo vaga & dubia prins fuerant, certificet emphatice gracorum more. Masculino enim genere & fingulariter dicimus, y gray, y ambarch, er amberas dr: & pluraliter, y gray, y ambarcheu, er amberodren. Et forminino singulariter, y sraig, y arther, &

pluraliter

pluraliter, y gwagedh, yr artheffen. & in obliquis fingulariter, o 4, i 4 gwr. pluraliter, o 4 gwr. i 4 gwr. &c. Vbi 4. pars ipfius . yr. eadem manet immutabilis.

Articuli igitur notninales (qui & femper adiectiui funt) non nifi improprie declinabiles dici possunt, quatenus videlicet (vt dictum ett) per casuum & numerorum sedes circumagi se permittant. Sicuri videre licet apud latinos gracos, & hebraos quam plurima, nomina, que partim numerorum, partim casaum, & partim denique vtrorumque ratione nullam variationem admittant: quæ tamen interim fingulorum tum cafuum, tum nume-rorum fignificationem induant. Exempla apud latinos funto fas, nil, nihil, instar, cornu, genu, gummi, frugi &c. Apud grzeos numero deficiunt hze 44,73,007, 10 aberru, ai 28inu &c. casu verò hæc an la para se Nec opus est ve in his linguis, tam accurate exempla promamus: quandoquidem hoc non est nostri instituti, Ebrais quoque vnica est terminatio in omnibus numeris & generibus, nec nisi adiunctis quibusdă vocibus in casus diducitur. Nec aliter quidem articulorum modus vllam prorius variationem admittit, sed vnisor-

miter verborum personis præfixus, vim quandam emphaticam illis etiam subministrat : vt mi a garabh,& mi y garabh. idh sybh ynn caru & ydh sybh ynn caru, ir sybh ynn caru, & yr 87bb ynn carn &cc.

Lingua igitur ista, sicuti catera omnes lingua in hac occidentali mundi plaga, finium casibus omninò destituitur. Ideoquè in variandis vocibus, qua per casuum aliquorum sedes declinari videntur, vtitur certis quibufdam particulis prapofitiuis feu prapofitionibus obliquorum sensui obsequentibus, in hunc modum;

Nominatino e, er, y, yr, ys.
Diffinctino er, oblegye &c. e, er, y, yr. Sing. & plur. Datino i 4, y 4, vel at, gyda, with &c. e, er, y, yr, ys. mal. & form. Paffino e, er, 7, 77, 72. 7.197.5 Vocatiuo de, er, y, yr, ys.
Ablatiuo o fr, beb, alhan, &c.e, er, y, yr.

Vndè ctiam liquidò patet oportere candem articulorum vocem (quum fit quodammodo inuariabilis) tam fingulari quam plurali numero, similiterque tam faminino quam masculino generi ancillari : vt in casuum & numerorum subsequentibus exemplis constat.

```

Ex his autem manifestum est cambrobrytannicam linguam vocatiuum in articulis primi generis agnoscere tum venuste tum eleganter; quum in cateris linguis articulos pos-

fidentibus (quod sciam) articuli vocatiuum ignorent.

Porrò è nominalibus quidem articuli er, & yr, post certas quassam particulas aphæresin vocalium a. & y. patiuntur: vt a r brenbin a r gynnulbeidbba. i r sybr ag ir dhaear.

o'r sybr ag o'r dhaiar. caru r sraig, casau r gra &c. Articuli enim er. & yr. aphæresin pass, semper communes erunt, id est tam consonantibus quam vocalibus & diphthongis in disserentes. indifferenter

indifferenter præponuntur: vt o rty, i rty, o rabbon, i rabbon. Vbi r. pars iplorum .er. & .yr. æque contonanti r. ac vocali .a. præfigitur.

Articuli e. & er. apud antiquos vitatifiimi (vt videre licet in vetustifiimis huius linguæ manuscriptis codicibus) nostris temporibus apud vulgum obsoleti sunt, ab vsuque recellerunt.

gerunt : vt choeg oyr a arbberynt , vel y arbberynt o aredurdred ag yghneidiaeth, id est yr hain a vel y arbberint o ardurdayd ag y ohneidiaeth. He all arbberint o ardurdayd ag y ohneidiaeth. Ex verbalibus verò articuli a, & T, fapenumero & fui & relatiti subintelle chi vicem cio vtebantur.

Omnes auté articuli în genere ex carum vocû funt numero, que ad alias voces earumque fignificata referuntur: nominales quidem ad nomina, exteraque quibus praponuntur : verbales verò ad verba, fingulo que corum actus & personas referentur : in personalibus quidem explicite, in impersonalibus verò implicite,

Vocaliores autem articulorum terminationes funt 4,0,1,7, & y, fignanter dicitur (vocaliores.) Nam db, n & f apud huius linguz grammaticos non fine ratione interfeminocales habentur.

De rofu Articulorum, max

AD huius instituti ratione quamplurimum spectare videtur, si ad confirmationem corum, que ante dicta funt, selecta maximaque rata de articulorum vsu(qui apud Cymbrobrytannos maximus est) pauca exempla ex optimis & antiquissimis quibusque huius lingua auctoribus decerpta, ob oculos proponamus, singularum orationis partium seriem fecuti.

Recum		De

De Numero. Rhibb.

Numeri funt duo, fc. Singularis de vno: vt gro, rehnat &c. Tot reperiuntur huius numeri terminationes fineluè, quot ferè funt in hac lingua literz, fiue monophthongum diphthongumuè confonanti, fiue confonantem monophthongo

aut diphthongo præfigas.

Pluralis de pluribus : vt gryr, y gneit. Quicquid finium terminationumue ratione in fingulari numero ineft, id omne suo modo ad pluralem refe-

Nominum terminationes tam vocalium diphthongorumque, quam etiam confo-nantium ratione, ex subsequenti Typo discernere licet.

De Cafu. Dychreliad.

Rectus, qui (præpositis casuum particulis signisue) per obliquorum sedes (vbiconuenit) in vtroque numero circumactus, voce non differt à nominatiuo radicali, seu à prima sui positione : vt spersyd, o spersyd, spersyd, spersyd, o spersyd, spersyd, o sper ryd, ynn fyberryd &cc.

Casus generaliter funt duo, íc.

Obliquus, qui non solum (præfixis etiam notis) per obliquorum loca (quantum fieri potest) in ambobus numeris circunductus, voce variatur à recto fiue radice: verum etiam ratione quarundam vocum in fermonis structura positarum, quandoque etiam in sede recti à primo sui themate degenerat: vt bara, o bhara, i bhara, ym bhara, gam bhara &c. Et in sede recti; a chares, a phenn, a thant a gerdhant. ei chares, ei phenn, ei thant a gerdhant.

Quo modo autem casus, Rectus siat aut obliquis, subsequens Demonstratio liquidò indicabit.

At si horum voces simpliciter inter imperandum aut hortandum, aut cum interdum permissionem aliquam significari cupis, vsurpaueris, Imperativus: sin verò posse, velle, aut debere sieri aliquid, nulla adiuncta optandi particula, nec vlla coniunctione, notari voles, Potentialis statim tibi efficietur modus. Imperative autem sie zear di, cared ebh: & passiue, carer bbi, carer di, carer ebh &c. Potentialiter verò in hune modum: earabh o's mynnabh', caren o's mynnin. Et passiue, cerir bhi o's mynnir, cerid ymen o's mynnid &c: id est galhabh', dysyabh neu evyshysabh garu; gelhir dyshir neu evyshysir bhy ghharu.

Licet igitur hi nothi modi temporum vocibus cum genuinis per omnia ferè conueniant, separataque eisdem serme vocibus tempora habere videantur: significatu tamen &

fignis ab illis discernuntur, vt infra videbitur.

Nec tantim hac omnia qua diximus per hos explicantur modos; sed & per interrogationes & dubitationes ambo hi modi (Indicatiuus nimirum & Infinitiuus) aliquando vsurpantur: vt a gara bhi? a gery di, ai znten ny chery? a vy bhi znn caru, ag a vyt tithen znn caru hebbyd? a gerir bhi, a gerir dithen? a zdys znn bhy ghharn, ag a zt

zm dy garu di? &c.

Et quemadmodum hi vmbratiles spurijue modi per voces primariorum tanquam suas bases explicantur: ita quoque Indicatiuus ipse quam sepistime per Instituum tanquam suum thema, primariamue radicem per oninia tempora periphrasticas circunscribitur, at non sine verbo substantiuo singulis personis in vtroque numero adiuncto: vt sybb, syt, yo you caru. Et plural. jm, yeb, ynt ynn caru. Impersect. sing. oedh yn, oedh ynn caru. Et plural. oedhem, oedheeb, oedhent ynn oaru, & sic in cateris personis & temporibus. Et passiue ydys, oedhid, busyd, buassid, boer ynn oaru &c. per cateras personas & tempora.

Modorum temporibus simplicibus & participijs, przter alia quzdam duo etiam prz-

cipuè accidunt, communis nimirum characteristica & terminatio.

Characteristica autem figuratiuauè seu indicatiua litera, siue vocalis diphthongusue ea sit, siue vnica pluresuè consonantes, est que terminationem proxime antecedit: vt créu, crío, blodéno, caru, cerdotta, dysedud. In quibus exemplise, i, eu, r, tt, siguratiue sunt; verum o, u, a, ud, terminationes: sed d in dysedud per paragogen ad sinem ap-

ponitur.

Characteristica quidem seu figuratiua litera meritò vocatur, quòd sit character seu typus & commune signum, quo modorum tempora simplicia & participia perpetuò cognoscantur, vtpotè quibus perpetuò adhæreat vicinaue sit. Licet enim terminationem omni ex parte mutaueris, aut quidpiam eorum quæ siguratiuam præcedant: illa tamen vt perpetua nota signumuè perpetuò manet immutabilis. Terminatio enim infinitiui si eorum quæ ab eo siunt terminationes commutatur, manente tamen semper infinitiui siguratiua in eorum singulis ab omni mutatione libera. Exempli gratia ab infinito (Cara) oriuntur hæc quæ sequuntur, per singula tempora in vtroquè numero.

Caleri sarem obial, forme del la Cambiologrammon singrio del muntifi. Nam figherem voccont co and lativaco conjunctionem aliquem voccar

In his exemplis terminatio mutatur variaturque ab infinitiui terminatione: & A vocalis que figuratium R antecedit, mutatur in E. R, tamen commune fignum immutabile manet. De alijs omnibus (preterque de ijs que poste excipientur) idem iudicato. Sed de his plura in Participio.

Characteristica autem litera, Indicatiua etiam dicitur, quòd quasi digito indicet qua ratione indicatiui tempora simplicia & participia tanquam proles progeniesue ab infinitiuo themate primario & genitore suo formanda deducendaque sint: quaque ratione rursus in eum retrò commeare ad eumque reduci possint, commonstret.

Methodus cognoscendi syllabas numero fyllabarum dubias.

Regula 1.

Mnis dictio (in qua inter mutam & liquefacientem consonam reperitur furdisona vocalis [3] iyllabarum numeri & non sensus tantum ratione aucta, vnius fyllaba duntaxat incremento, non auctam perpetuò superabit. Nam si (exempli gratia) ignore-tur quoto syllabarum numero constet dictio [Bagy],] augeatur ipsa, dicaturque [Bagy-len.] Cum igitur [Bagylen] in soluta oratione trissyllabica sit: [Bagyl] certè dissyllabica erit. Sed culm in carmine fit huiuscemodi vocum auctio, liquefit & euanescit (quod obscurisona sit) vocalis [3.]Et proptereà, in carmine à poetis non pingitur, ceu [Bagl & Baglen;)quarum hac diffyllabica, & illa monofyllabica apud eos & vulgum inuenitur. Ita & [Bygylew] triffyllabica eft, quia non aucta [Bygyl] diffyllabica erat.

Palifine fulcimenta taudhle ibutea, id ell limetpartiona, imfint appellant ful cquecira elementa, quod Grammachi s laluga R pucata cincula los palos iplos que libus tanquèm virers, ex horum forgulis 151

addedancas conficients ve in fe-

Cognoscitur syllaba syllabarum numero dubia, & compositione dictionum. Compositia en im dictio supplicem, vnitate solum vincit augmenti syllabici: idque in vnoque sensuum numero. Singul. ceu [Lheidr & sheidrdhyn.] Hoc quidem dissyllabicum, illud verò monosyllabicum. Plural. ceu [Earthir & enribirien.] Singul. dissyllabicum, & Plural, triffyllabicum eft.

Exempla Palorto slugas dhuicorim.

Ictionis deriuatio, syllabz etiam ambiguitatem amouebit. Eadem enim est proportio deriuati (quod ad fyllabarum numerum attinet) ad primitiuum, qua fuerat com-politi ad liuum limplex. Nam eadem incrementi lyllabici qualitas, in vtroque iuxta proportionem inuenitur. Ergo fi tetralyllabicum est [Dynionen]profecto trisfyllabicum erit [Dynion.] Et fi disfyllabicum est [Libeidraidh] derivatum, necessario primitium [Lheidr] monofyllabicum erit. Idem de [Ant & enraidh] & conf.milibus intelligendum eft.

Syllabarum quantitas literarum mentura, & fyllabicarum colligationum temporibus, quibus fyllabæ conftant, cohæret. Syllaba quidem longa plurium temporum, breuis verò temporis vnius ent. Longiore enim temporis mentura fyllabæ longæ pronunciandæ, & breuiore fyllabæ breui opus est. Omne lentisonum longum, omnéque collectisonum breue. At minilo secins diphthongum collectisonam quants alia collectisona fine rotundisona fyllaba productiorem esse constat. Pariter & syllabarum lentisonarum nonnullæ nonnullis lentisonis fyllabis tum literarum mensura numeroue, quz ipsi insunt, tum earun-dem temporibus longiores crunt.

Primum est cum bine fyllabe ita in vnam coeunt fyllabam, vt nomenclaturam prorius comutet, & ex ascendente eleuataque descendens fine depressa fiat, propriumque tonum amittat. Proprius enim cuiusque syllabz tonus, ascendens & acutus est: veluti Gyénnthorr &c.

2. Secundum, est quim tres syllabæ in vnam coalescunt syllabam: vt [Ca-ridig] à [Caru] &c. Et huiucelmodi dictio tono circumflexa nominatur.

3. Tertium, est quoties quatuor syllabæ in vnam syllabam confluunt, quarum prima accentu omninò priuatur: vt [Spadyden &c.]

4. Quartum, est ratio notæ aspirationis [H,] quæ dictionem polysyllabam acuit, velut cum [H] inter duas vltimas syllabas constituitur: vt Cadarnhán.

5. Quintum, est syllabæ sectio, illius nimirum quæ vt vnica syllaba scribi sollabar mar quidem partitio juxta topum sit; vt. Galasth, x spass, x spass. solebar; que quidem partitio iuxta tonum fit : vt Galanth, yspaas, ystoor,

That; pro Galath, That, Thir, That Sc.
Sextum, est fyllabarum compositio cum ponderis iactura. Hoc enim cogit fyllabam grauitonam, ceu [Grenn, penn, carr, corr] pondus fiue grauedinem deponere. Nam quado cum vna pluribusue fyllabis concrescit, vc Meisrenn, parleisen, caredigion: June grauitate & pondus amittet, poteritque rythmice tam cum grauisona quam cum leuisona syllaba concinnari.

Cyrchicum.

Exosymphonicii, Heterosymphonicum, Hysterorythmicii, Allosymphonii & Rhythmitegens, Jquod ad se aliud dictuab alieno versu alliciens & inducens, quod sibi in carmine concentu respodeat, proxime antecedentis rhythmi e-insque primarij sonum tegit & occultat, ve (instar omnium) videre licet in extremo Paladyrij Vnodylici recti primo sticho, statim post principem eiusdem stichi rhythmum.

Cyrchicu duplex:

Exorythmicum Rhythmiforbes & Rhythmiliquans, J quod principem propriúmque propositi stichi (in quo inest) Rhythmum prorsus absorbens & liquans Jeque pro proprio & genuino rhythmo intrusorie constituens, alium ex proxime sequenti sticho sibsque rhythmice congruentem rhythmum adsciscit, concentúmque subsequentis & primarij rhythmi vna introducit, vt. patet in exemplis.

Cyrchicum, seu vnica sit vox siue plures, est dictum quoddam, quod symphonicum vel syrrythmicum quum sit, nihisque habeat in eodem versu, quo cum symphonicò aut rhythmicè concinnetur, è proxime subsequenti versu, aliam cum qua concentum vel symphonicum vel symphonicum vel rhythmicum faciat, dictionem sibi acquisit.

Paladyrium & Pennum.

PRius Vnodylici carminis Distichon, Paladyrion; Posterius Pennion & Pensellion vo-

Copula fine Coningium.

Copula nihil aliud est, quam cuiusuis generis carminis, quod pari Distichorum numero constet, Distichon quodlibet.

Pennillium Brachiúmue.

Monoftichum duplex :- Monostichum longum, quod ex brettioribus Pennillijs compositum, in eodem carminis genere reperitur; vel quod plura minora Pennillia in se contineat. Longum dicitur etiam & id, quod licet plura minora Pennillia in se non complectatur, breuiore tamen Pennillio & in eadem carminis specie longius inuenitur.

Monostichon breue, & quod alia dinersa Pennillia non complectitur, & quod licet complectatur, longiori tamen Pennillio quantitate cedit.

Guantum & Rhaguantum.

GVantum & Rhaguantum sunt paus quadam in carminibus decantandis: quorum hoc posteriorem quidem, illud verò priorem pausam significat. Etsi in quibusdam interdum vna sola, interdum dua, interdum tres plurésue inueniuntur pausa: in aliquibus tamen nulla reperitur propriè dicta pausa, yt poste à videbitur.

De Englynici siue Ynglynici carminis Formis, Constitutionibus, Scansionibus & Symphonijs.

Vnodylicum rectum.

Nodylicum, homœorythmicum fiue homœoteleuticum rectum, tetrafticho comprehenditur: cuius quidem prius Distichon Paladyrion vocatum, sedecim; posterius verò Pennium & Pensellum appellatum, quatuordecim pedibus seu syllablis constant. At in fine primi versus paladyrij, proxime post illius versus rhythmu principalem, consequitur Cyrchicum nominatu: quod Cyrchicum, quando primi versus rhythmus primarius in syllabam sextam terminatur, tetrasyllabum erit; Et quoties in septimam syllabam desinit rhythmus, trissyllabum erit; cum verò in octauam exit rhythmus, dissyllabum erit; at cum

in nonam finit rhythmus, monofyllabum erit, vt in exemplis,
